

PACE Software Development Process Definition and Control System

www.milsoft.com.tr

Software Development Process Definition and Control System (PACE) is a web-based Enterprise Resource Planning (ERP) System developed to be used in software development enterprises. PACE aims the integration of different facets of a software company via the embracement of project management, finance, quality assurance, configuration management and human resources functions in a software setting. The system also includes a timesheet application, which provides the data required for costing and project management purposes.

System Features

- Platform Independency,
- Advanced use of J2EE Technology*,
- N-tier architecture,
- Object Oriented Implementation (Java) of Scalable and modular design,
- ANSI SQL 92 Standard Compatibility
- Web Based (Sun's Java Web Start Technology®)
- Advanced User Authorization Features
- On-line Case Sensitive Help (Sun's Java Help Technology®)
- The system is developed with IBM Web Sphere Studio Application Developer
